PROFESSIONAL SUMMARY

Results-driven Front-End Developer with a B.Eng. in Communications & Electronics Engineering. Specializes in building responsive, scalable, and pixel-accurate web applications using React.js, Next.js 14, and TypeScript. Experienced in translating Figma designs into production-ready interfaces, integrating REST APIs, and managing complex application state with Redux Toolkit. Combines a strong engineering foundation in OOP, data structures, and algorithms with a passion for clean, maintainable code and optimal user experience.

CORE COMPETENCIES

Responsive Web Design • Performance Optimization • Authentication & Authorization • REST API Integration • State Management • UI/UX Implementation • Reusable Component Architecture • Agile Collaboration • Cross-Browser Compatibility • Figma-to-Code Workflow

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+), TypeScript, HTML5, CSS3, C++

Frameworks & UI: React.js, Next.js 14, Redux Toolkit, Bootstrap, Tailwind CSS, Material UI (MUI), Flowbite

Libraries & Tools: Axios, TanStack Query (React Query), Formik, Yup, Git, GitHub, Figma (Dev Mode / MCP)

CS Fundamentals: OOP, Data Structures, Algorithms, CCNA Networking Basics

Dev Practices: Responsive Design, REST API Integration, State Management, Component Architecture, Figma-to-Code Workflow

PROJECTS

E-Commerce Admin Dashboard | Next.js 14 • TypeScript • Redux Toolkit • MUI • REST API

Live Demo: <https://ecommerce-dashboard-eight-sandy.vercel.app/> | **GitHub:** <https://github.com/ThorayaRabea/ecommerce-dashboard>

- Translated a Figma design system into a pixel-accurate, fully responsive admin dashboard using Next.js 14 and Material UI.
- Built dynamic data visualizations (sales, revenue, and customer analytics charts) with real-time filtering and interactive stat cards.
- Implemented full product, customer, and order management modules with CRUD operations, integrated with a live REST API.
- Managed complex global state with Redux Toolkit, including async data fetching, caching, and optimistic UI updates.
- Designed a role-based access structure (Admin Role, Control Authority) and a reusable component architecture for scalability.

Social Media Application | Next.js 14 • TypeScript • Redux Toolkit • MUI • Axios • Formik

Live Demo: <https://social-media-nextjs-blond.vercel.app/> | **GitHub:** <https://github.com/ThorayaRabea/social-media-nextjs>

- Built a full-featured social media platform with complete authentication (Sign Up / Sign In), profile management including photo upload and password change.
- Implemented full CRUD functionality for posts (Create, Update, Delete) alongside a real-time-like interactions system: Likes, Shares, and Comments.
- Engineered a social graph with Follow/Unfollow functionality and Follow Suggestions, using Redux Toolkit for global state management.
- Integrated Formik for form handling and Axios for API communication, ensuring type safety throughout with TypeScript.

E-Commerce Platform | React.js • Context API • Axios • TanStack Query • Formik • Yup

Live Demo: <https://ecommerce-react-app-coral.vercel.app/> | **GitHub:** <https://github.com/ThorayaRabea/ecommerce-react-app>

- Architected a responsive React.js e-commerce app with dynamic routing, custom hooks, and Context API-based cart/authentication state.
- Built robust form validation using Formik & Yup with smart button states (dirty/isValid) for optimized UX.
- Integrated Axios and TanStack Query (React Query) for efficient server state management and automatic data synchronization.

Weather Application | Vanilla JavaScript • HTML5 • CSS3 • OpenWeather API

Live Demo: <https://weather-gamma-six-85.vercel.app/>

- Developed a real-time weather tracking app using Vanilla JavaScript with OpenWeather API integration to fetch and render dynamic environmental data.

Games Collection (Memory Game & Tic-Tac-Toe) | *Vanilla JavaScript · DOM Manipulation*

Live Demo: <https://games-two-nu.vercel.app/>

- Built interactive browser games focusing on core JavaScript logic, event handling, and advanced DOM manipulation.

Bank System (C++) | *C++ · OOP · Data Structures · Algorithms*

- Designed a secure banking system applying OOP principles, linked data structures, and algorithmic problem-solving.

EDUCATION

B.Eng. in Communications & Electronics Engineering

2017 – 2022

Al-Azhar University, Cairo, Egypt

- Graduation Project: Data Center Network Simulation with firewall protection against Layer 2 attacks (VLAN hopping, MAC flooding).

COURSES & CERTIFICATIONS

- React.js — Route Academy, 2024
- Front-End Development Level 1 — NTI (National Telecom Institute), 2023
- Software Engineering Diploma — Route Academy, 2022 – 2023
- CCNA (Cisco Certified Network Associate) — Cisco, 2021 – 2022

LANGUAGES

Arabic: Native **English:** Professional Working Proficiency (Upper-Intermediate)
